Allowable Subject Matter

4.   The following is an examiner's statement of reasons for allowance: the prior art does not

teach or fairly suggest in a communications environment where multiple instances of diverse

access protocols share a communications media, where it is desired that transmission from one

instance not collie with transmission from another instance, and each instance of an access

protocol has the ability to restrict access to the media for all stations in that instance practicing

that protocol, and the stations having the restricting ability can all communicate with the other

stations able to restrict access, including: assigning each instance of each access protocol to

separate phases occurring in allocated time periods; communicating the allocated time periods

for each protocol instance to the stations having the ability to restrict traffic for the protocol

instance; for a selected protocol, assembling spoofing frames from an RTS frame transmitted by

APs associated with the selected protocol, followed by a CTS frame transmitted by stations

associated with the selected protocol; and restricting access of stations in each protocol instance

to only those time periods assigned to that protocol instance, as recited in independent claims 1

and 10.
